Why Quantum Computing?

Superposition and Entanglement

- Quantum mechanics describes superposition and entanglement of quantum particles
- Quantum computing can use these phenomena to its advantage

Why Quantum Computing?

- Security
 - Public/private key encryption?
 - Could make current RSA encryption obsolete
 - QKD (Quantum Key Distribution)

$$3.167 \times 6.301 = 19.955.267$$

Why Quantum Computing?

- Drug development
 - It takes a quantum system to simulate a quantum system
 - Interactions between molecules
 - Gene sequencing
 - Protein folding

Why Quantum Computing?

- Machine Learning
 - Analyze large quantities of data
 - Fast feedback
 - Emulate human mind

 \end{aligned}$$

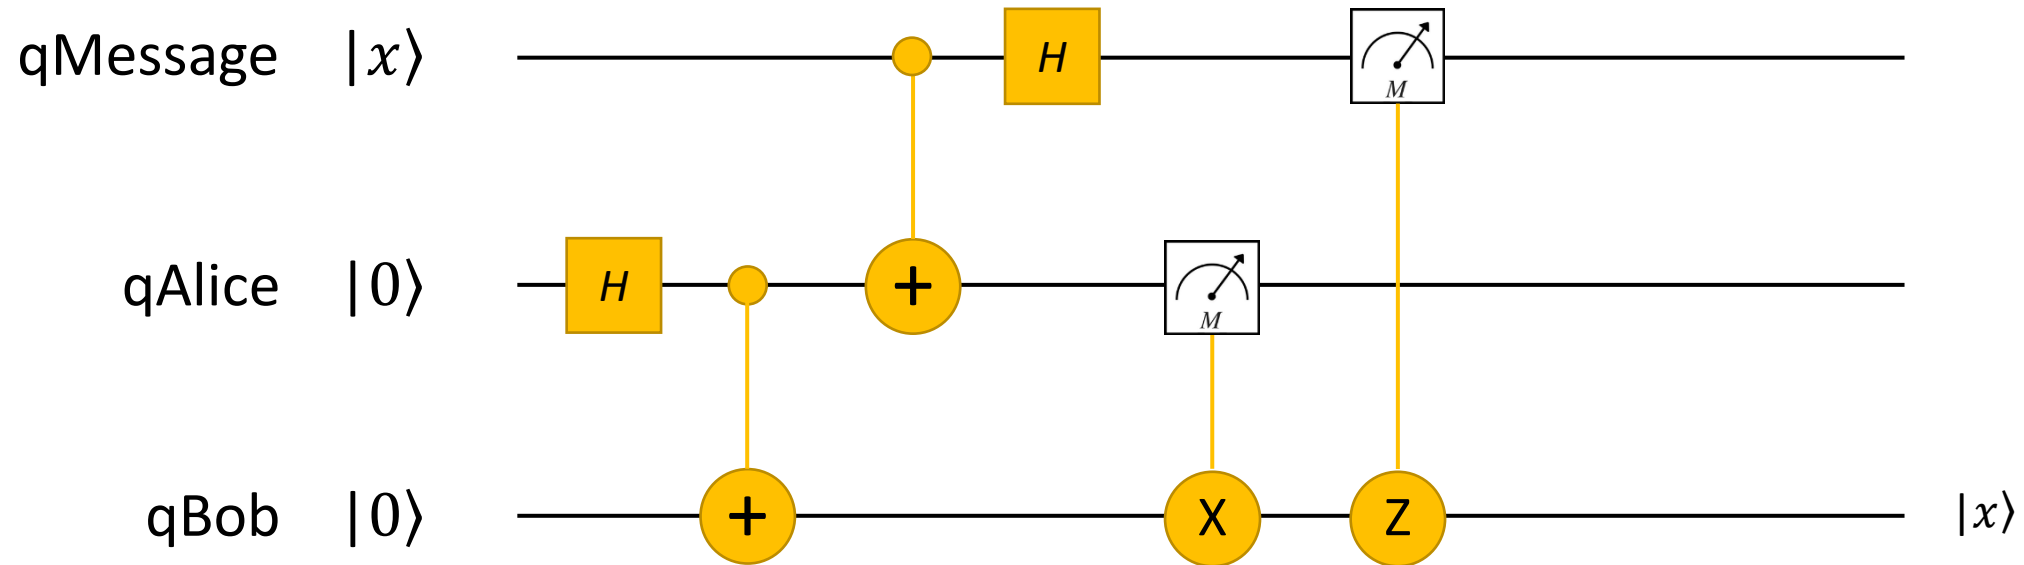

Entanglement

If the product state of two qubits cannot be factored, they are entangled

$$\begin{pmatrix} 1 \\ \frac{1}{\sqrt{2}} \\ 0 \\ 0 \\ 1 \\ \frac{1}{\sqrt{2}} \end{pmatrix} = \begin{pmatrix} a \\ b \end{pmatrix} \otimes \begin{pmatrix} c \\ d \end{pmatrix} \rightarrow \begin{aligned} ac &= \frac{1}{\sqrt{2}} \\ ad &= 0 \\ bc &= 0 \\ bd &= \frac{1}{\sqrt{2}} \end{aligned}$$

This set of two qubits has a 50% chance of collapsing to $|00\rangle$ and a 50% chance of collapsing to $|11\rangle$
